

## **Royal Helium Begins Triaxial Mag and Seismic Work on the Bengough Block in Southeast Saskatchewan**

SASKATOON, SASKATCHEWAN – July 14, 2021. Royal Helium Ltd. (“Royal” or the “Company”) (TSXV: RHC) (TSXV: RHC.WT) (OTCBQ: RHCCF) announces that it has begun an airborne Triaxial Magnetic Survey over its Bengough Project in southeastern Saskatchewan. Flown by the Axiom Exploration Group, this data, used in conjunction with previously acquired 3D seismic survey, will be used to refine and finalize the initial two well program at Bengough. The RPS Group of Calgary is currently reprocessing the 3D seismic data based on the information obtained from the first three wells at Climax.

Andrew Davidson, President and CEO of Royal Helium, states “Based on the success of our first three helium wells, we are pleased to have both Axiom and RPS continue with the second drill program and fine tune our next well targets utilizing the knowledge and data gained from the first three wells at Climax. We are looking forward to getting our summer/fall drilling programs in southeastern Saskatchewan underway while at the same time working to get the first three wells in the Climax block in southwestern Saskatchewan into production. Southeastern Saskatchewan has some of the highest historic helium showings in the province.”

### **Royal Helium Ltd.**

Royal Helium is focused on the exploration and development of helium production in southern Saskatchewan. With over 1,000,000 acres of prospective helium lands held under a combination of permits, leases and applications, Royal is one of the largest helium rights holders in North America. Located next to highways, roads, cities and, importantly, existing oil and gas infrastructure, Royal’s projects were methodically evaluated for helium potential and have been vetted by helium experts, professional geologists and engineers.

For more information, please contact Andrew Davidson, the Chairman, President and CEO of the Company.
